

NOVABACKUP

BACKUP AND RECOVERY SOFTWARE

WWW.NOVASTOR.COM/NOVABACKUP

NovaBACKUP is
designed to deliver
automated, reliable,
cost-effective
protection for all your
critical data assets
within a safe, easy-to-
manage process.

Innovative, Award-Winning Software

For almost two decades NovaBACKUP has been helping millions of users recover from data loss and disasters. NovaBACKUP has won numerous awards and recognition from industry experts for its advanced design, powerful features, extended device support and its intuitive interface.

Instant Results

NovaBACKUP allows you to go from your initial installation to complete protection in just minutes. Easy-to-navigate wizards allow users of any level to quickly perform backup and restore procedures through simple step-by-step guided processes. A flexible scheduler allows you to customize your backups to suit your own personal environment. NovaBACKUP's set-and-forget logic performs automatically in the background keeping your information secure without additional effort on your part.

Faster More Reliable Backups

During the initial backup, NovaBACKUP copies and compresses all files and folders that you select. For subsequent incremental backups, NovaBACKUP compares your files to existing backup data and sends only files and folders that are new or have changed. NovaBACKUP also verifies the content of the files to ensure that all your data is properly backed up. All errors are logged and users are notified of any problems so that action can be taken to guarantee file protection.

Smart, Simple Restore

NovaBACKUP creates a list of all files backed up and allows the user the flexibility to restore all files or only the files needed. Ultimate flexibility allows restores to be made through a variety of options including the ability to overwrite existing files or restore to alternate locations.

Complete Disaster Recovery

NovaBACKUP protects more than data, it protects the entire system. NovaBACKUP gathers all the necessary information to completely restore a computer. NovaBACKUP allows a user to create a Disaster Recovery CD that can boot an unresponsive system, locate a previous backup, and then restore the operating system, applications, and all computer settings. NovaBACKUP saves countless hours of reinstalling software, updating drivers, and reconfiguring the computer.

Additional Data Protection

NovaBACKUP protects all files, including open files. Integrated support is now included for Windows XP/2003, but can be extended using NovaStor's Open File Manager. NovaBACKUP also includes integrated virus protection to help prevent the transfer of infected files before the backup occurs. Free Virus definition updates are continually made available to provide ongoing protection for the latest viruses.

"NovaBACKUP is the one I'll be using."

- April 2005, Jon L. Jacobi, Contributing Editor, PC World Magazine

Plug-and-Play Support

Plug-and-play support provides compatibility with hundreds of storage devices including DVD, CD, local and network drives, tape and most other storage devices. NovaBACKUP has integrated support for more devices than any other backup software.

Protect Networked Computers

Peer-to-Peer backup is possible because NovaBACKUP is network aware. A single backup procedure can protect the data on your computer and other systems on your small business or home network. Backup any network drive your computer can access.

Multiple Languages Supported

NovaBACKUP supports multiple languages to help simplify the installation and end user adoption process.

Expert Technical Support

Our expert assistance is available to curb downtimes providing a better return on investment for your data security. NovaStor aims to provide our customers with reliable software that they can depend on. For times when assistance is required, standard technical support is offered via email, our web site, online chat, and phone. Fee based priority technical support, maintenance and upgrade protection are also available.

System Requirements:

Pentium or higher CPU
64 MB RAM
Minimum 15 MB free disk space
Internet Explorer 6.0 or higher

Software Requirements:

NovaBACKUP v7.3 Professional:

Windows 98SE, ME, NT Workstation, 2000 Professional, XP Home/Professional

NovaBACKUP v7.3 Server:

Windows NT 4 Server, Windows 2000 Professional/Server/Advanced Server/SBS, Windows XP Professional, Windows 2003 Server/Standard/Web/Enterprise

Open File Backup:

Windows XP Home/Professional, 2003 Server/Standard/Web/Enterprise
